

MOTOR FOR MFJ 1786/MFJ 1788

Replacement motor for MFJ 1786 and MFJ 1788 magnetic loop antennas.

This metal version replaces the old version in plastic housing. In contrast to the old version with plastic gears, the new engine has steel gears.

Attention! The drive shaft of the new motor is positioned eccentrically. Therefore the old engine with the centrally mounted drive shaft cannot be replaced by the new engine without a minor adjustment. See fig. 2
