

MFJ 1024

SWL OUTDOOR ACTIVE ANTENNA

50 KHZ - 30 MHZ

The MFJ 1024 is an active SW antenna with a 137 cm telescopic antenna assy with integrated low noise pre-amplifier that needs to be mounted outside and also has an indoor control unit. Outdoor antenna and control unit are connected with a coax cable (RG 58) supplied approx. 15 m.

Two receivers and a second antenna can be connected to the control unit and can be selected via a switch. The amplification of the HF amplifier is variable.

This active broadband receiver antenna with low-noise pre-amplifier has an excellent dynamic range and is therefore resistant to overloading. The control unit is equipped with changeover switches for two receivers and external / active antenna, an antenna attenuator and gain control.

Mount antenna assy outdoor away from electrical noise for maximum signal and minimum noise. Has convenient mounting holes for easy installation. Receives strong clear signals. Has gain control and ON LED switch to select two receivers and auxiliary or active antenna.

Specifications

Frequency range : 50 kHz - 30 MHz

Attenuator : 20 dB

Dimensions control unit : W 152 x H 76 x D 127 mm
