

ALAN MIDLAND M-5

MOBILE CB RADIO WITH REMOTE CONTROLLED MICROPHONE

With the Alan M-5, "CB in the mike" Midland innovates CB communication. The controls are placed on the mike, which also has an LCD display to see channels, bands and settings. The extremely small size of the CB and the die-cast metal structure make the M-5 virtually indestructible. The USB plug on the front of the device allows to easily charge any electrical device, as well as cell phones or tablets.

This Alan M-5 multistandard radio will work on both AM & FM and has dual speakers - one in the radio and another in the mic, with the option to turn the one off in the mic, if not required. Another unusual feature is the speaker/mic socket on the side of the mic. This allows you to connect an external earpiece or headset to the mic. This is standard Kenwood type wiring.
