

AMERITRON RCS-12CX

AUTOMATISCHE REMOTE ANTENNESCHAKELAAR CONTROLLER

This new RCS-12 Ameritron automatic control unit is suitable for switching remote antenna relays. The RCS-12X works with most Icom, Yaesu and Kenwood transceivers that are equipped with a band related data stream output.

The control unit works with each relay up to a maximum of 8 positions with voltages between 12 and 30 VDC. The switch reads the information from the transceiver and automatically selects the pre-programmed antenna (s).

Programming is done by pressing a button. The RCS-12 remembers the various antennas per band, but in the first instance automatically chooses the last used antenna for that band. The RCS-12CX is also equipped with:- a linear amplifier buffered relay line, which prevents the linear switching on during the switching of an antenna, - connection for remote use- select switch automatic / manual antenna (s)

Dimensions: W 210 x D 155 x H 62 mm

RCS-12X : includes automatic controller and 8 position relay box

RCS-12LX : includes automatic controller and 8 position relay box with lightning surge protection

RCS-12CX : automatic controller only

Optional rig interface cables for most rigs available
