

PENETROX ANTI-CORROSION COMPOUND

Penetrox A Anti-Oxidant is an electrical joint compound that ensures a proper electrical connection between aluminum and copper metal parts such as conductors, telescoping aluminum tubing, or other antenna and grounding parts. Penetrox A Anti-Oxidant is a compound of a natural oil base with suspended zinc particles, which ensure high conductivity at all voltage levels by displacing moisture and preventing the corrosion or oxidation of the metal. It is not recommended for use with rubber or polyethylene insulated wire, but it is only intended to be used between all aluminum to aluminum and aluminum to copper tubing or bare conductor connections.

Quantity: 30 gram
