

LITTLE OWL 9" FIXED WINGS

Are the birds in your antenna system, tree etc. bothering you? We have the solution!

The owl is the archenemy of other birds. We offer three models.

There are two conditions to achieve results:

- 1 : The owl has to be mounted above the landing place of other birds. Birds never sit below a bird of prey.
- 2 : For a good, consisting effect the owl has to move regularly, e.g. in the wind. You can mount the owl on a spring or just hang it.

The material of the owls is UV-resistant plastic, which does not effect the radiation diagram of an antenna.

The height of this little owl is approx. 27 cm.
