

WAGNER W 300

SPRAY GUN FOR PLASTIDIP | LOW PRESSURE, AIRLESS

We offer three models spray guns specially for airless spraying of PlastiDip® fluid rubber on car, rims, spoiler, hood, garden furniture, fences and many other purposes.

Thanks to its high atomisation power the powerful, precise W 300 Fine spray system provides smooth, professional surfaces. With the 2-Stage switch for thin or thick materials it always achieves a perfect result, and in the widest variety of projects, indoors and out.

This powerful fine spray system was specially developed for small to medium projects. Why not use its almost endless possibilities! With this powerful spray system PlastiDip can be applied with less dilution and with less number of layers yet achieved full coverage.

Golf Ball Technology

With Wagner's new "Golf Ball Technology" nozzle and air cap have small indentations which cause air turbulence. This enables the use of aerodynamic advantages similar to those of a golf ball, which result in an optimised air flow and consequently a better spray pattern.

Click & Paint System

With this fine spray system the Plasti Dip carrying parts can be separated from the turbine allowing fast Plasti Dip colour changes and simple troublefree cleaning.

The spray gun can easily be cleaned without disassembling:

- For PlastiDip you use Plasti Dip Thinner
- For HCF you use water

Technical data

Power consumption : 350 W
Paint flow rate : smoothly regulated, 0-125 ml/Min.
2- stage switch : for regulation of the turbine power
Atomizing output : 105 W
Reservoir capacity : 800 ml
Air hose length : 1.8 m
Max. viscosity : 130 DIN-sec
Operating voltage : 230 VAC/50 Hz
Weight : approx. 2,8 kg
