

PIGMENT MIDNIGHT OCEAN - 10 GR

CREATE YOUR OWN PLASTIDIP COLOR WITH THE "PRO FX SPECTRAL PIGMENTS"

PRO FX SPECTRAL PIGMENTS

Our Pro FX Spectral Pigments add a whole new level to decorating and detailing with PlastiDip.

In cooperation with one of the world's premier pigment manufacturers, we offer a range of non-metallic effect pigments that are a step above common pearl additives. Our pigments are designed for consistent color, effect, and long term UV stability. The colors and effects created by our pigments are based on reflection and refraction of light through the pigment structure. This gives you highlights and subtle color shifts that enhance the final look and can't be achieved with standard colors.

APPLICATION

To achieve the best finish possible, we recommend a layered approach.

- 1 : Apply your base color. This can be any color of PlastiDip. Our illustrations typically show a base of black Plasti Dip but any color can be used.
- 2 : Apply the effect pigment layer. This is our effect pigment mixed with Clear Plasti Dip Sprayable/Diluted. Our pigments allow you to subtly alter the intended finish by controlling the ratio of pigment to PlastiDip. We recommend a low ratio of pigment to PlastiDip, anywhere from 5 g to 25 g per 1 gallon.

Our best results have been a mix of only 5 grams pigment to 1 gallon Plasti Dip ! This is much lower than recommended for other pigment brands. This allows the maximum light dispersion within the pigments and gives you the highest level of enhancement. Lower pigment levels highlight the effects and give a glossier sheen. Higher levels give you saturated color and a satin sheen.

- 3 : If you want a high gloss sheen, apply a layer of Plasti Dip Glossifier. This really lets the effect pigments shine.

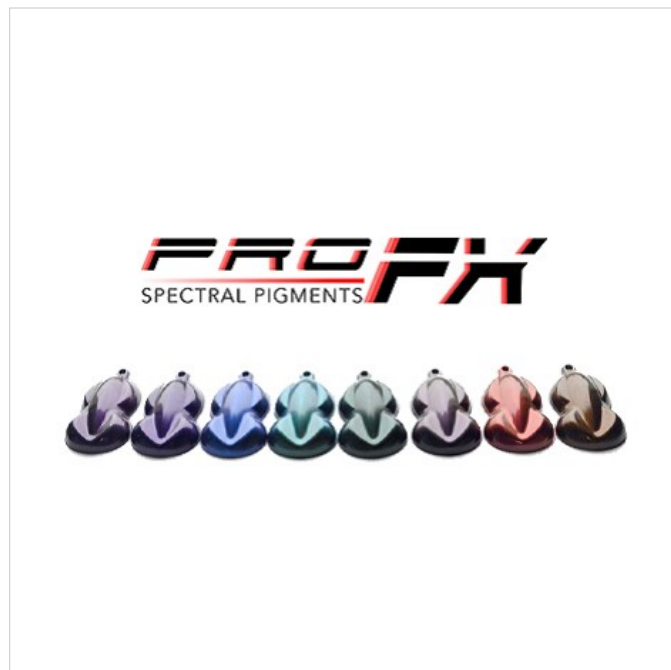

Keys to proper application and consistent results include:

- proper measuring
- thorough mixing
- wetting out of the pigments

Spectral pigments look awesome

Our Pro FX spectral pigment's color changing, sparkle, and glitter produce an extremely broad range of colors and effects. You will be amazed by the broad pallet you can create by using existing Plasti Dip base colors and our pigments. With these Pro FX effect pigments, Standard Colors, Fluoros and Blazes look awesome. With a long lasting UV stability, fading of the base coat, including Fluoros, is minimized.
