## ANTENNAS FROM THE GROUND UP, VOL. 1

By ham radio operator and antenna enthusiast L.B. Cebik, W4RNL.

Practical level antenna book for technicians, amateur radio operators, and students. Provides direct and clear information on the theory of "antennas from the ground up". Gives rational expectations based on as much clarity as a non-mathematical treatment of antennas can provide. Based upon questions received from folks struggling to set up or improve an antenna within the limitations of modern yard sizes and budgets. W4RNL wrote this book as if sitting with the reader to help.
