

# KENT HAND KEY WOOD BASE

## HAND KEY | WOOD BASE WITH BRASS COMPONENTS

The professional Kent Hand Key Wood Base from the good old age when morse code was the only way of communication.

The Kent Low-Line Morse Key is engineered to the highest specification from solid brass.

A superior lasting and trouble-free performance is achieved by the use of silver contacts and sealed instrument ball race bearings, which ensure a totally free pivot movement with minimum friction and side play.

Contact adjustment is achieved by fine pitched threaded screws with instrument knurled heads giving micro precision adjustment.

The machined wood base is weighted for stability, individually polished, and the underside is trimmed with green baize, non-slip feet and is hand finished.

The wood base ensures high rigidity and stability in use while high precision ball race bearings and silver plated contacts ensure smooth, reliable, trouble-free operation under the most arduous conditions.

All Kent hand keys and paddles are handmade in UK for over 25 years.

### Specifications

Type: Wood Base with Brass Components

Dimensions Base : 162 x 63,5 x 12,5 mm

Bearing Block : 25,4 x 25,4 x 25,4 mm
