

PLASTIDIP SPRAY BLAZE

FLUOR COLORS

GIVE ANY DO-IT-YOURSELF PROJECT A BRIGHT, NEON COLOR.

PlastiDip Blaze is a brand-new color collection of aerosol PlastiDip. Available in Blaze Blue, Orange, Pink, Yellow, Green and Purple, Plasti Dip Blaze will give any do-it-yourself project bright, neon color. For better visibility, improved safety, or just plain good looks, the PlastiDip Blaze collection is sure to catch anyone's eye.

Whatever PlastiDip Blaze color you choose, and no matter what sort of craft, home, automotive, or other project you use it for, it will deliver the same performance and protection as our other Plasti Dip varieties. Just shake it up and spray it on for easy application on nearly any substrate surface to protect against abrasion, corrosion, and the elements, while also adding a soft, comfortable grip. For the best, brightest color, we recommend applying PlastiDip Blaze over a white base (white Plasti Dip is preferred, but not necessary).

The original Plasti Dip® made in U.S.A. is an air dry, synthetic multi-purpose rubber coating that can be easily applied by spraying, brushing or dipping. Plasti Dip® resists moisture, acids, abrasion, weathering, electrical shock, skidding/slipping, corrosion; coats and gives a comfortable, controlled, color coded grip to all types of tools: lawn and garden, mechanical, electrical, woodworking, and masonry.

Plasti Dip® is not just for tool handles. It can also be applied to:

- Wood : seals and protects from weathering and prevents splinters
- Metal : reduces vibration, deadens sound, prevents corrosion, insulates electrically and from extreme temperatures
- Glass : shatterproofs glass objects (available in clear)
- Rope/Fabrics : weatherproofs, prevents rotting and fraying
- Plastics : protects delicate surfaces from scratches
- Rubber : weatherproofs, wear resistant
- Tools : gives color coded grip to all types of tools
- Maps : weatherproofs, tear resistant (available in clear)

Flexible, air-dry synthetic rubber coating, that can be easily applied by spraying. Spray the desired number of layers. Let the coating dry for approx. 4 hours.

Depending on the intensity and duration of UV radiation, similar to a sunburn of the human skin, also the pigments of fluorescent paints and lacquers, including PlastiDip Blaze and PlastiDip Fluor products, after a shorter or longer time locally fade or discolor.

With the addition of so-called stabilizers, the process will be slowed down, but unfortunately can not be completely avoided. An additional layer of transparent PlastiDip, Satinizer or Glossifier gives extra protection against UV radiation to PlastiDip Blaze and PlastiDip Fluor coatings.

PLASTIDIP SPRAY BLAZE

FLUOR COLORS

GIVE ANY DO-IT-YOURSELF PROJECT A BRIGHT, NEON COLOR.

Performix advises not to remove discolored parts but locally applying an additional layer of the same color until the desired coverage and the original color is achieved. Another layer of clear PlastiDip gives additional protection against UV radiation.

The spray is extremely suitable for less accessible spots. Content: 325 ml.

Suitability for application, and performances of finished goods coated with PlastiDip, is the sole responsibility of the customer and end user. Product and item design, pre-treatment, coating conditions, quality assurance and conditions of product end use, are among the factors that affect performance of the coated products, and are outside the control of ClassicInternational. Classic International expressly denies specific or implied warranties, including warranties for fitness for a particular use or purpose.
