

# PLASTIDIP SPRAY BRIGHT METALIZER

ADD AN OPAQUE ALUMINIUM OR GOLD METALLIC FINISH TO YOUR PLASTIDIP COATING!

PlastiDip Bright Aluminium and Bright Gold Metalizer are the latest new additions to the enhancer Metalizer range! It gives your Plasti Dipped item a bright aluminium or bright gold metallic finish. Apply a minimum of 3 layers for full coverage.

Plasti Dip Enhancers are specially designed to make the already-outstanding Plasti Dip home solution even better. The enhancers are easy to use and will give any Plasti Dipped item a unique look.

Both original and spray-on Plasti Dip are available in a number of ready-made colors. Now, with the PlastiDip Metalizers, you can further customize the colors of your PlastiDip projects. Available in Gold, Silver, Copper, Blue, Green, Red and Purple. PlastiDip Metalizer adds a shimmering, metallic finish while letting the color of the PlastiDip underneath show through.

In general Metalizer enhancers have a clear PlastiDip base. However, the PlastiDip Spray Bright Aluminium and Bright Gold Metalizers do have a considerable coverage.

Before apply two or three coats Bright Aluminium or Gold Metalizer, first you have to apply 5-6 coats of one of the PlastiDip base colors. This base coat enables you to remove the complete coating easily afterwards.

PlastiDip Metalizers are available in 325 ml aerosol cans. They apply quickly and easily—shake them up and spray them on, just like our spray-on Plasti Dip. Using PlastiDip Enhancers couldn't be easier; the results couldn't be better. Coverage approx. 4,6 m<sup>2</sup> per can.

PlastiDip Enhancers are formulated to bond with the unique chemical structure of cured PlastiDip for superior adhesion and long life. PlastiDip Enhancers are not recommended for use on any other surface.

Using Plasti Dip Spray in cooler temperatures may affect drying times, finish quality, and spray performance. If you plan on spraying your project in cooler conditions, we recommend pre-warming the aerosol can by placing it in a warm room and allowing the contents to reach room temperature. Additionally, cooler conditions may affect the surface you are spraying. If you are concerned about spraying your project in cooler temperatures, test in an inconspicuous area first to ensure the resulting finish will be what you're looking for.

See product labels for further information.

Suitability for application, and performances of finished goods coated with PlastiDip, is the sole responsibility of the customer and end user. Product and item design, pre-treatment, coating conditions, quality assurance and conditions of product end use, are among the factors that affect performance of the coated products, and are outside the control of ClassicInternational. Classic International expressly denies specific or implied warranties, including warranties for fitness for a particular use or purpose.
