

PLASTIDIP FLUOR UVX | 3,79 L

DIPPING | IF DILUTED ALSO SUITABLE FOR SPRAY GUN

GIVE ANY DO-IT-YOURSELF PROJECT A BRIGHT NEON COLOR.

UV-RESISTANT!

New from Performix! In connection with European regulations it is not permitted to offer Toluene containing products to private users. To enable Classic International to freely offer the Performix 1 gallon cans to anybody, on our request Performix replaced the Toluene proportion by Xylene, which has the same properties. Therefore these one gallon cans (UVX-type) can now be ordered online by anyone. Additionally, the new Performix 1 gallon cans are also UV resistant.

The original PlastiDip® made in U.S.A. is an air dry, synthetic multi-purpose rubber coating that can be easily applied by spraying, brushing or dipping. PlastiDip® resists moisture, acids, abrasion, weathering, electrical shock, skidding/slipping, corrosion; coats and gives a comfortable, controlled, color coded grip to all types of tools: lawn and garden, mechanical, electrical, woodworking, and masonry.

PlastiDip® is not just for tool handles. It can also be applied to cars, rims and:

- Wood : seals and protects from weathering and prevents splinters
- Metal : reduces vibration, deadens sound, prevents corrosion, insulates electrically and from extreme temperatures
- Glass : shatterproofs glass objects (available in clear)
- Rope/Fabrics : weatherproofs, prevents rotting and fraying
- Plastics : protects delicate surfaces from scratches
- Rubber : weatherproofs, wear resistant
- Tools : gives color coded grip to all types of tools
- Maps : weatherproofs, tear resistant (available in clear)

Flexible, air-dry synthetic rubber coating, that can be easily applied by dipping. Dip the desired number of layers. Let the coating dry for approx. 4 hours.

Depending on the intensity and duration of UV radiation, similar to a sunburn of the human skin, also the pigments of fluorescent paints and lacquers, including PlastiDip Blaze and PlastiDip Fluor products, after a shorter or longer time locally fade or discolor.

With the addition of so-called stabilizers, the process will be slowed down, but unfortunately can not be completely avoided. An additional layer of transparent PlastiDip gives extra protection against UV radiation to PlastiDip Blaze and PlastiDip Fluor coatings.

Performix advises not to remove discolored parts but locally applying an additional layer of the same color until the desired coverage and the original color is achieved. Another layer of clear PlastiDip, Satinizer or Glossifier gives additional protection against UV radiation.

PLASTIDIP FLUOR UVX | 3,79 L

DIPPING | IF DILUTED ALSO SUITABLE FOR SPRAY GUN

GIVE ANY DO-IT-YOURSELF PROJECT A BRIGHT NEON COLOR.

UV-RESISTANT!

Attention Due to the lack of interest in certain colors and small packages, manufacturer decided no longer producing these items. The following table shows the available colors in this packaging.

If you use a spray gun (low pressure; airless) to apply PlastiDip, you have to dilute the PlastiDip (dipping) up to 50% (= 1:1) with PlastiDip Thinner. See additional product information and related items below.

Also suitable for industrial purposes.

Suitability for application, and performances of finished goods coated with PlastiDip, is the sole responsibility of the customer and end user. Product and item design, pre-treatment, coating conditions, quality assurance and conditions of product end use, are among the factors that affect performance of the coated products, and are outside the control of ClassicInternational. Classic International expressly denies specific or implied warranties, including warranties for fitness for a particular use or purpose.
